

# Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to MDH for the week ending May 18, 2019

Prepared by the Division of Infectious Disease Surveillance  
Prevention and Health Promotion Administration  
Maryland Department of Health

*The data presented in this document are provisional and subject to change as additional reports are received.*

## SUMMARY

During the week ending May 18, 2019 influenza-like illness (ILI) intensity in Maryland was **MINIMAL** and there was **LOCAL** geographic activity. The proportion of outpatient visits for ILI reported by Sentinel Providers increased slightly. The proportion of outpatient visits for ILI reported by Maryland Emergency Departments decreased slightly. The proportion of MRITS respondents reporting ILI decreased. Clinical laboratories reported a decrease in proportion of specimens testing positive for influenza. Nine specimens tested positive for influenza at the MDH lab. There were 4 influenza-associated hospitalizations.

### ILI Intensity Levels

✓ Minimal
Low
Moderate
High

### Influenza Geographic Activity

No Activity
Sporadic
✓ Local
Regional
Widespread

## ILINet Sentinel Providers

Eighteen providers reported a total of 4,769 visits this week. Of those, 41 (0.9%) were visits for ILI. This is **below** the Maryland baseline of **2.0%**.

ILI Visits To Sentinel Providers By Age Group	This Week Number (%)	Last Week Number (%)	Season Number (%)
Age 0-4	10 (24%)	12 (29%)	1,737 (33%)
Age 5-24	14 (34%)	16 (39%)	2,210 (42%)
Age 25-49	7 (17%)	5 (12%)	669 (13%)
Age 50-64	5 (12%)	4 (10%)	384 (7%)
Age ≥ 65	5 (12%)	4 (10%)	244 (5%)
Total	41 (100%)	41 (100%)	5,244 (100%)

## Visits to Emergency Departments for ILI

Emergency Departments in Maryland reported a total of 56,872 visits this week through the [ESSENCE surveillance system](#). Of those, 1,034 (1.8%) were visits for ILI.

ILI Visits To Emergency Departments By Age Group	This Week Number (%)	Last Week Number (%)	Season Number (%)
Age 0-4	257 (25%)	262 (24%)	13,282 (19%)
Age 5-24	353 (34%)	365 (33%)	20,932 (31%)
Age 25-49	240 (23%)	287 (26%)	20,723 (30%)
Age 50-64	111 (11%)	112 (10%)	8,490 (12%)
Age ≥ 65	73 (7%)	67 (6%)	4,693 (7%)
Total	1,034 (100%)	1,093 (100%)	68,120 (100%)

# Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to MDH for the week ending May 18, 2019

## Community-based Influenza Surveillance (MRITS)

MRITS is the Maryland Resident Influenza Tracking System, a weekly survey for influenza-like illness (ILI). A total of 447 residents responded to the [MRITS survey](#) this week. Of those, 1 (0.2%) reported having ILI and missing 2 days of regular daily activities.

MRITS Respondents Reporting ILI By Age Group	This Week Number (%)	Last Week Number (%)	Season Number (%)
Age 0-4	1 (100%)	0 (0%)	15 (6%)
Age 5-24	0 (0%)	1 (33%)	62 (27%)
Age 25-49	0 (0%)	0 (0%)	58 (25%)
Age 50-64	0 (0%)	1 (33%)	55 (24%)
Age ≥ 65	0 (0%)	1 (33%)	43 (18%)
Total	1 (100%)	3 (100%)	233 (100%)

## Clinical Laboratory Influenza Testing

There were 58 clinical laboratories reporting 1,508 influenza diagnostic tests, mostly rapid influenza diagnostic tests (RIDTs). Of those, 92 (6.1%) were positive for influenza. Of those testing positive, 26 (28%) were influenza Type A and 66 (72%) were influenza Type B. The [reliability of RIDTs](#) depends largely on the conditions under which they are used. False-positive (and true-negative) results are more likely to occur when the disease prevalence in the community is low, which is generally at the beginning and end of the influenza season and during the summer.

Positive Rapid Flu Tests by Type	This Week Number (%)	Last Week Number (%)	Season Number (%)
Type A	26 (28%)	60 (47%)	23,146 (88%)
Type B	66 (72%)	69 (53%)	3,268 (12%)
Total	92 (100%)	129 (100%)	26,414 (100%)

Week Ending Date	Percent Type B	Percent Type A
5-Jan-19	15%	85%
12-Jan-19	14%	86%
19-Jan-19	11%	89%
26-Jan-19	12%	88%
2-Feb-19	9%	91%
9-Feb-19	6%	94%
16-Feb-19	7%	93%
23-Feb-19	6%	94%
2-Mar-19	8%	92%
9-Mar-19	8%	92%
16-Mar-19	8%	92%
23-Mar-19	11%	89%
30-Mar-19	13%	87%
6-Apr-19	19%	81%
13-Apr-19	24%	76%
20-Apr-19	35%	65%
27-Apr-19	45%	55%
4-May-19	56%	44%
11-May-19	53%	47%
18-May-19	72%	28%

## State Laboratories Administration Influenza Testing

The MDH Laboratories Administration performed a total of 19 PCR tests for influenza and 9 (47.4%) were positive for influenza. Of those testing positive, 4 (44%) were positive for Type A (H3) and 5 (56%) Type B (Victoria). PCR testing is more reliable than RIDT. The MDH testing identifies subtypes of influenza A and lineages of influenza B, information that is not available from the RIDT results. The table below summarizes results by type, subtype, and lineage.

Positive PCR Tests by Type (Subtype)	This Week Number (%)	Last Week Number (%)	Season Number (%)
Type A (H1)	0 (0%)	52 (49%)	2,468 (60%)
Type A (H3)	4 (44%)	44 (42%)	1,504 (36%)
Type B (Victoria)	5 (56%)	10 (9%)	103 (2%)
Type B (Yamagata)	0 (0%)	0 (0%)	52 (1%)
Dual Type A(H1/H3)	0 (0%)	0 (0%)	9 (<1%)
Total	9 (100%)	106 (100%)	4,136 (100%)

# Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to MDH for the week ending May 18, 2019

## Influenza-associated Hospitalizations

A total of 4 influenza-associated hospitalizations were reported this week. (A person with an overnight hospital stay along with a positive influenza test of any kind, e.g., RIDT or PCR, is considered an “influenza-associated hospitalization” for purposes of influenza surveillance.) This surveillance is conducted as a component of the Maryland Emerging Infections Program.

Influenza-Associated Hospitalizations by Age Group	This Week Number (%)	Last Week Number (%)	Season Number (%)
Age 0-4	2 (50%)	2 (50%)	253 (8%)
Age 5-17	0 (0%)	0 (0%)	176 (5%)
Age 18-24	0 (0%)	0 (0%)	79 (2%)
Age 25-49	1 (25%)	0 (0%)	577 (17%)
Age 50-64	0 (0%)	0 (0%)	863 (26%)
Age ≥ 65	1 (25%)	2 (50%)	1,406 (42%)
Total	4 (100%)	4 (100%)	3,354 (100%)

## Influenza-associated Deaths

An influenza-associated death is one with a clinically compatible illness and a positive influenza test of any kind.

**Pediatric Deaths:** The total number of pediatric (< 18 years of age) deaths reported this influenza season is 4.

Influenza-associated pediatric mortality is a reportable condition in Maryland. Pediatric deaths are tracked without regard to hospitalization.

**Adult Deaths Among Hospitalized Patients:** A cumulative season total of 61 deaths have been reported among adults admitted to Maryland hospitals.

Influenza-associated adult mortality is *not* a reportable condition in Maryland. However, surveillance for mortality in hospitalized adults is conducted as a component of the Maryland Emerging Infections Program.

Influenza-Associated Deaths	Cumulative Season Total
Pediatric Deaths (Age < 18)	4
Adult Deaths (in hospitalized cases)	61

## Outbreaks of Respiratory Disease

There was no respiratory outbreak reported to MDH this week. (Disease outbreaks of any kind are reportable in Maryland. Respiratory outbreaks may be reclassified once a causative agent is detected, e.g., from ILI to influenza.)

Respiratory Outbreaks by Type	This Week Number (%)	Last Week Number (%)	Season Number (%)
Influenza	0 (0%)	0 (0%)	84 (68%)
Influenza-like Illness	0 (0%)	0 (0%)	20 (16%)
Pneumonia	0 (0%)	0 (0%)	20 (16%)
Other Respiratory	0 (0%)	0 (0%)	0 (0%)
Total	0 (0%)	0 (0%)	124 (100%)

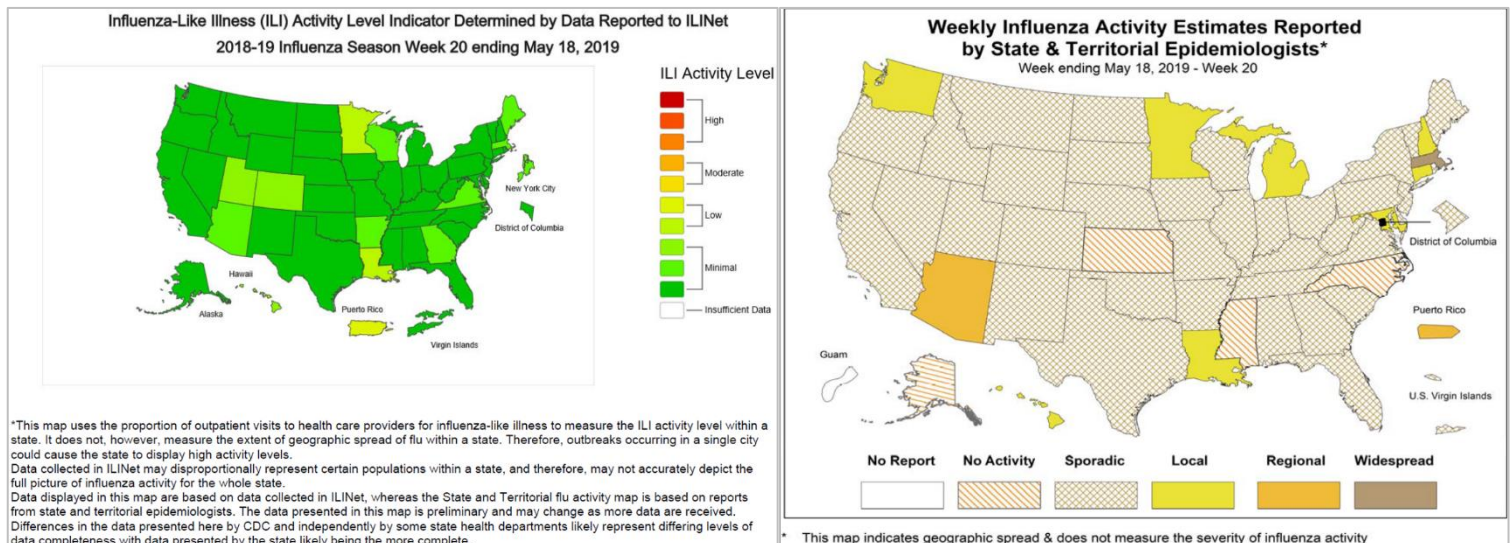

# Maryland Weekly Influenza Surveillance Activity Report

A summary of influenza surveillance indicators reported to MDH for the week ending May 18, 2019

## National Influenza Surveillance (CDC)

Influenza activity remained low in United States and was similar to last week. While influenza A(H1N1)pdm09 viruses predominated from October to mid-February, influenza A(H3N2) viruses have been more commonly identified since late February. Small numbers of influenza B viruses also have been reported.

- **Viral Surveillance:** The percentage of respiratory specimens testing positive for influenza viruses in clinical laboratories remained low. During the most recent three weeks, influenza A(H3) viruses were reported more frequently than influenza A(H1N1)pdm09 viruses nationally.
- **Influenza-like Illness Surveillance:** The proportion of outpatient visits for influenza-like illness (ILI) remained at 1.5%, which is below the national baseline of 2.2%. All regions reported ILI below their region-specific baseline level.
- **Geographic Spread of Influenza:** The geographic spread of influenza in one state was reported as widespread; Puerto Rico and one state reported regional activity; eight states reported local activity; the District of Columbia, the U.S. Virgin Islands and 36 states reported sporadic activity; four states reported no activity; and Guam did not report.
- **Influenza-associated Hospitalizations:** A cumulative rate of 65.7 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported. The highest hospitalization rate is among adults 65 years and older (221.7 hospitalizations per 100,000 population).
- **Pneumonia and Influenza Mortality:** The proportion of deaths attributed to pneumonia and influenza (P&I) was below the system-specific epidemic threshold in the National Center for Health Statistics (NCHS) Mortality Surveillance System.
- **Influenza-associated Pediatric Deaths:** Three influenza-associated pediatric deaths were reported to CDC during week 20. Two occurred during the 2018-2019 season and one occurred during the 2017-2018 season.
- **Outpatient Illness Surveillance:** Nationwide during week 20, 1.5% of patient visits reported through the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) were due to influenza-like illness (ILI). This percentage is below the national baseline of 2.2%. (*ILI is defined as fever (temperature of 100°F [37.8°C] or greater) and cough and/or sore throat.*)
- On a regional level, the percentage of outpatient visits for ILI ranged from 0.6% to 2.4% during week 20. All regions reported a percentage of outpatient visits for ILI below their region-specific baseline.

## Where to get an influenza vaccination

Interested in getting a flu vaccine for the 2018-19 influenza season? Go to <https://phpa.health.maryland.gov/influenza/Pages/getvaccinated.aspx> and click on your county/city of residence. You will be redirected to your local health department website for local information on where to get your flu vaccine.
